**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

1) Responsive to communication(s) filed on 12 January 2011.  
 2a) This action is FINAL.      2b) This action is non-final.

## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 45 is rejected under 35 U.S.C. 103(a) as being unpatentable over Grunert (US 3030959) in view of Kennedy (US 20030144609) and Cunningham et al. (US 6093156).

Regarding claim 45, Grunert teaches a puncture instrument comprising a plurality of needles for puncturing the surface of a biologic body and for performing seriatim puncturing with each needle comprising a cylindrical case (22), a removable puncture needle cartridge for housing a plurality of needles connected in series in an axial direction ("replaceable magazine" column 1), and a loading cover at one end for permitting loading and unloading of the cartridge (19) (Figure 1). Grunert doesn't expressly teach the loading cover on a side parallel to the axial direction of the cylindrical case. However, Kennedy teaches a cylindrical case for loading a puncture needle in which the case has a loading cover (12) for the puncture component (16) that opens along the axial direction of the case (18) (Figure 2) permitting unobstructed viewing of the installation. Further, Cunningham teaches a medical device can be installed in a housing by any number of cover configurations including an axial opening (Figures 6, 7, 9) or an end opening (Figure 5, 11A-B). It would have been an obvious

design choice in view of Kennedy and Cunningham to substitute a loading cover along the axial length of Grunert in order to load the puncture cartridge.

***Allowable Subject Matter***

3. Claims 1-10, 13-31, 41, and 46 are allowed as was previously indicated in the advisory action mailed 12/23/10.

***Response to Arguments***

4. Applicant's arguments with respect to claim 45 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***
